A large model. One question.

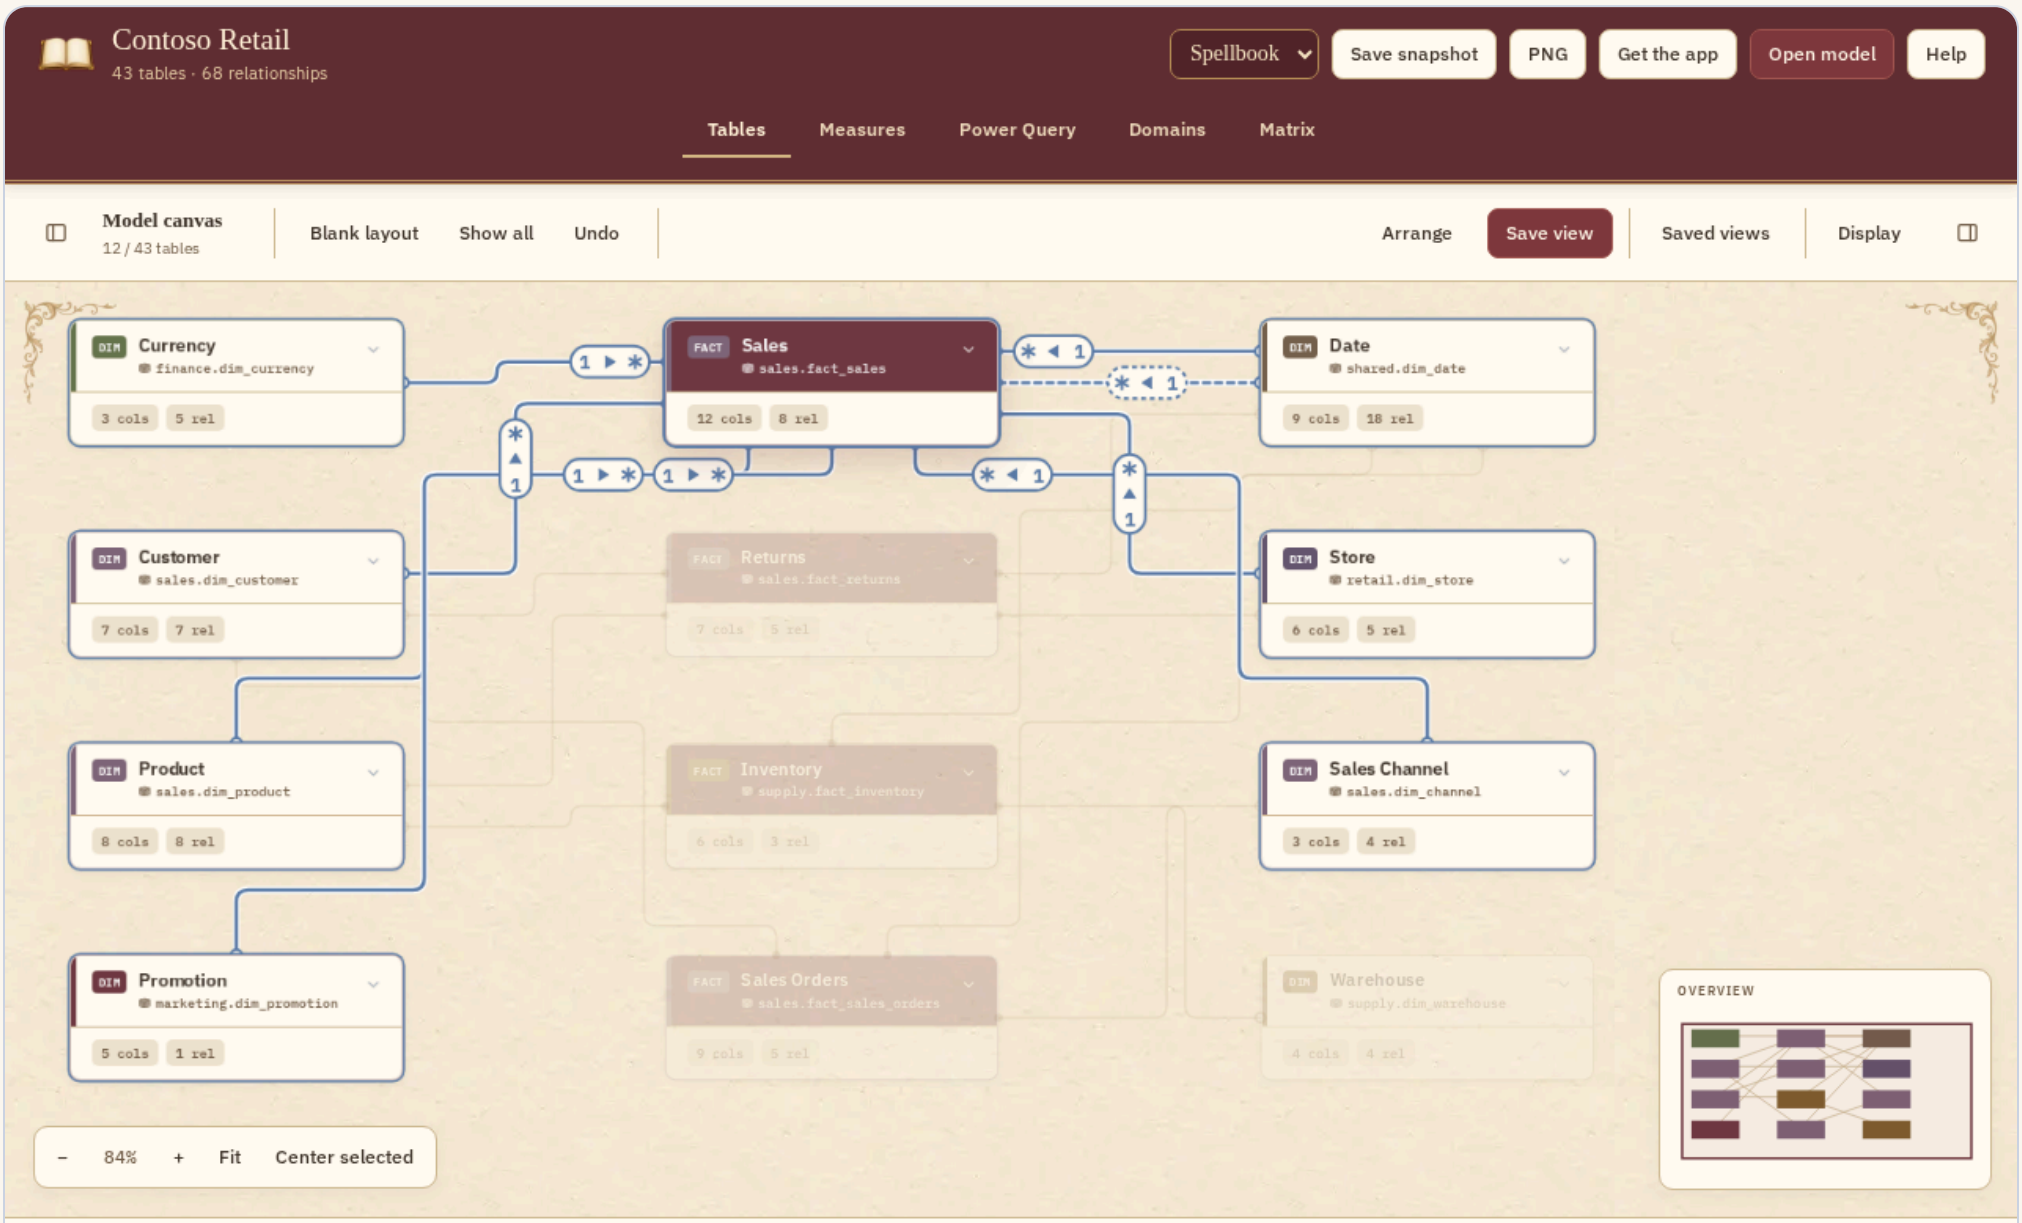

43 tables. 12 on the canvas. What connects to Sales?

> Start with the tables you need. Then focus on Sales and its relationships.

Dim keeps the context.

Select Sales, then choose Dim unrelated.

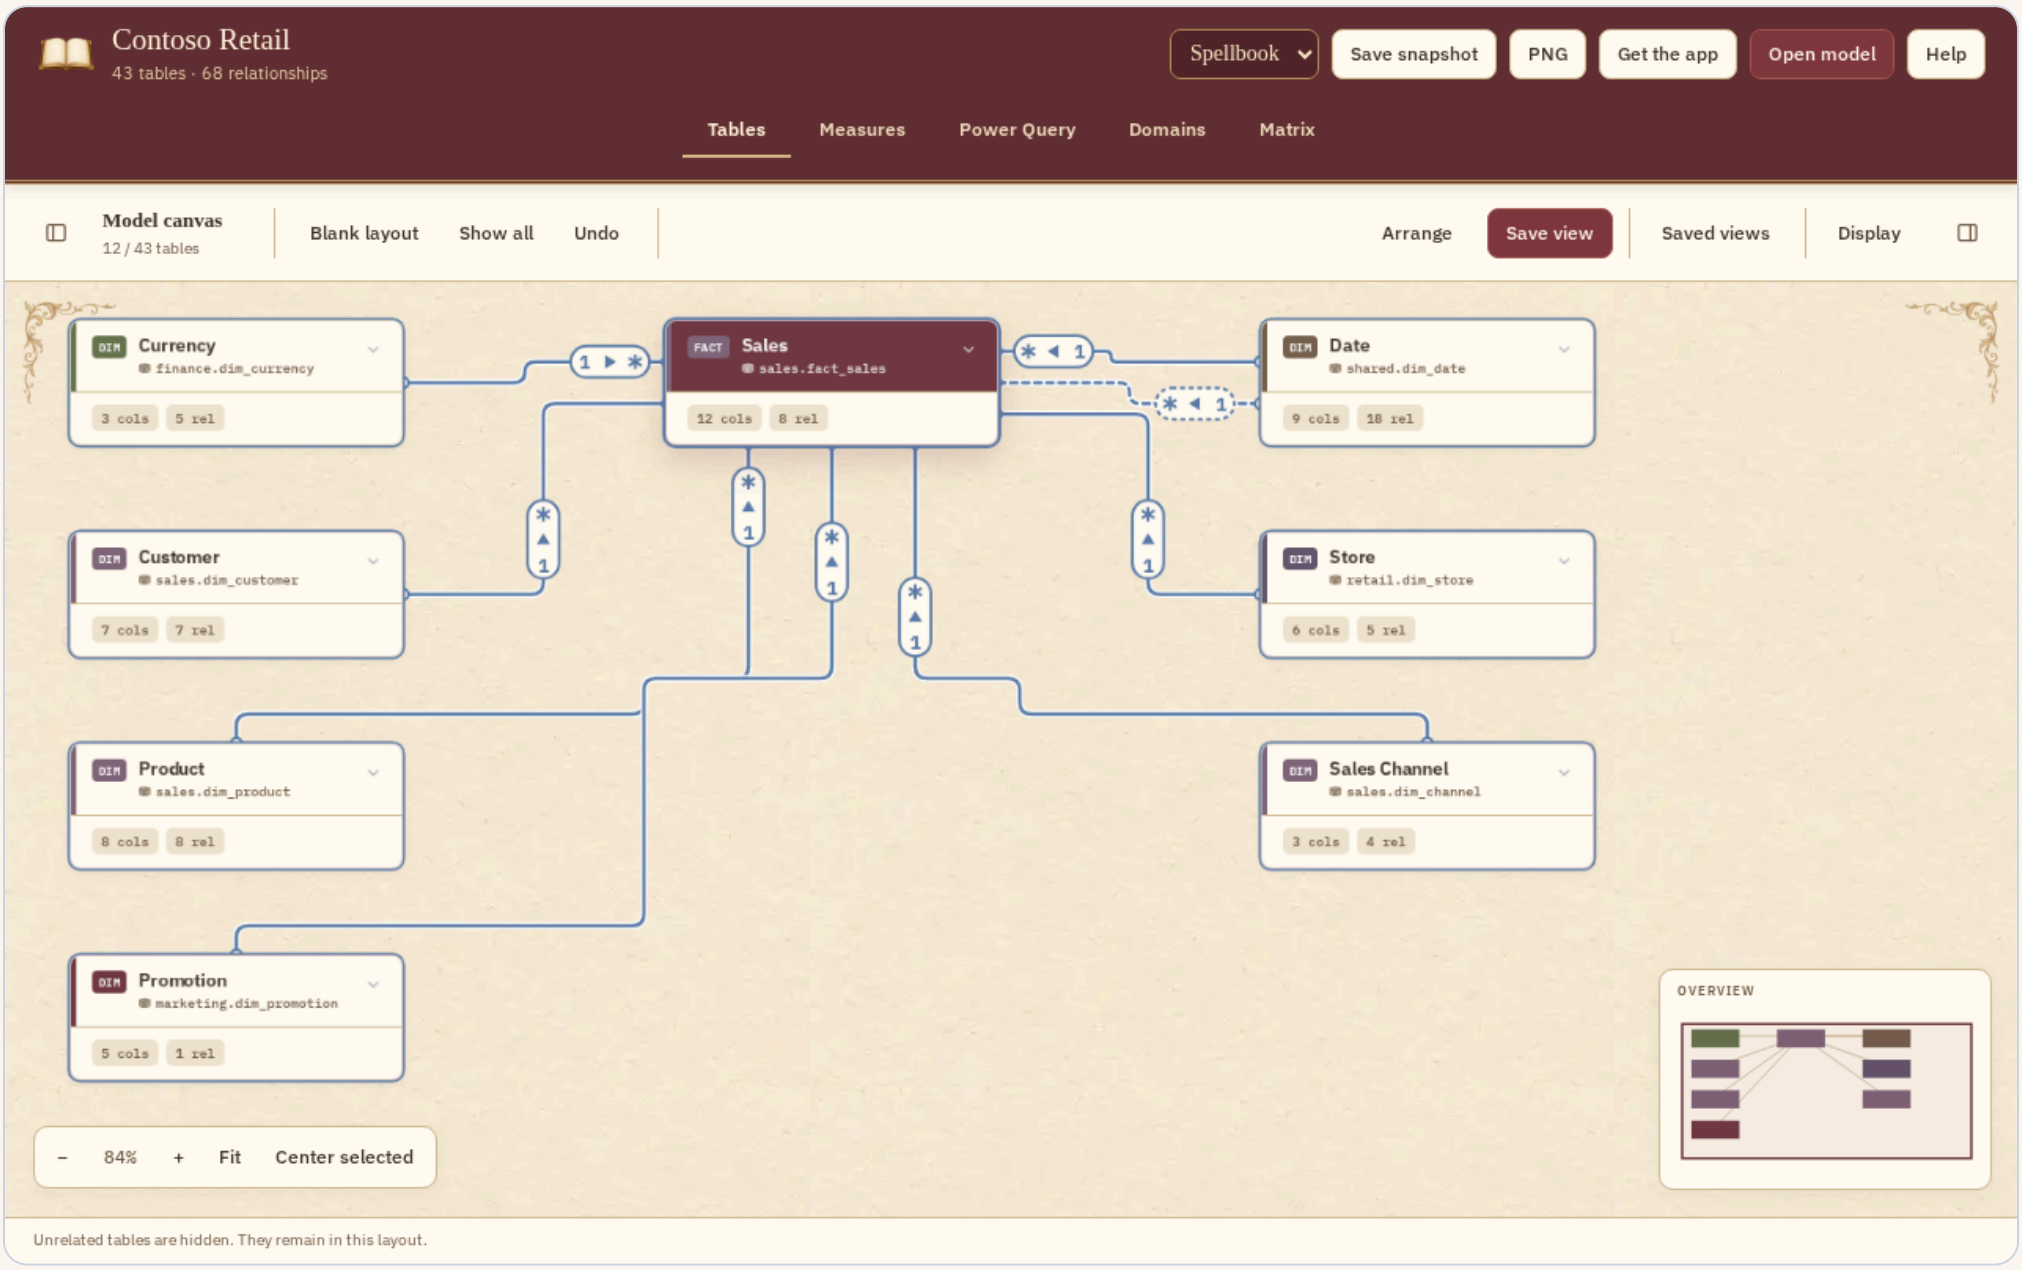

All layout tables are visible; unrelated tables are dimmed.

> Related tables stay clear. Unrelated tables fade, so you can still see the bigger picture.

Hide removes the distractions.

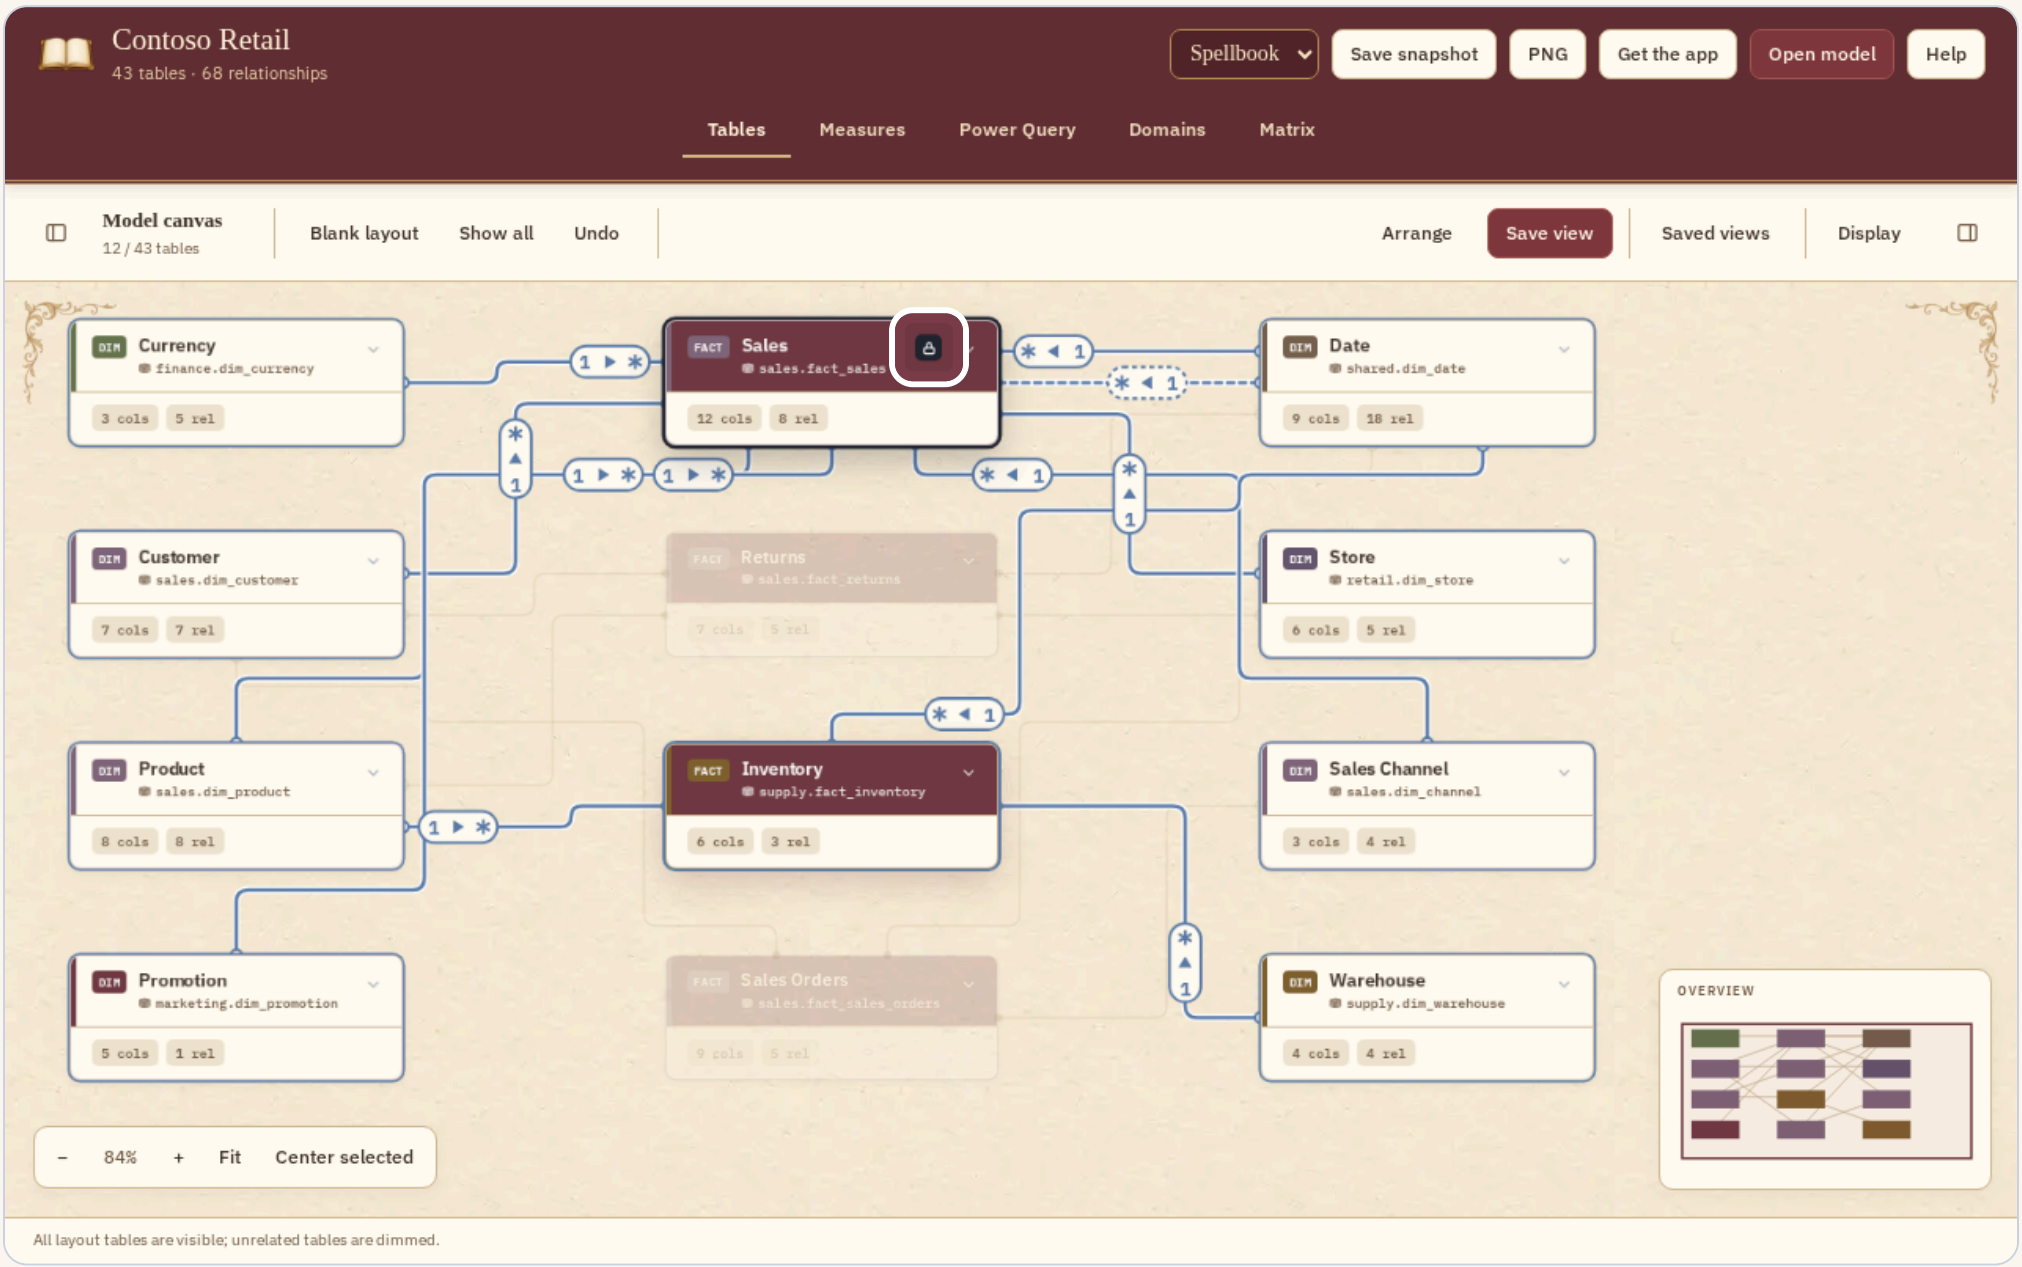

Keep Sales selected, then choose Hide unrelated.

> Only Sales and its related tables remain visible. Nothing is deleted from your model.

Lock Sales. Explore Inventory.

Back in Dim view: lock Sales, then select Inventory.

> Sales and its relationships stay highlighted while you explore Inventory. Click the lock again to release Sales.
